## Room design - **In Focus** - Original size approx. 51 x 90 cm / 20" x 35"

### “ In Focus “

This composition of clear transparency, strong and bright color Dichroic glass, stands for simple design and sets clear accents at the same time.

This little piece of color is now the focus of the beholder!

This glass work "is something refreshing" – the little use of color affects an entire indoor environment.

Just as with many of my other glass wall pictures, I have once again used transparent satin iridescent glass, from the art glass manufacturer Bullseye.

The matte coating of iridescent transparent glass is ideal if you want transparency, while not missing out on a noble diffuse character.

The rather strong line-shaped surface structure of the Bullseye 1101-48Fi Prismatic (here the colorless basic glass) acts differently depending on the viewing angle. The iridescent coating shows it's advantage in its various facets.

#### Material:

Basis glass: Bullseye 1101-48 Fi, clear Prismatic, iridescent

larger application: Bullseye 1125-31 Fi, transparent orange iridescent

smaller application: Dichroic ( 3534235 ) UCGR-RR clear ripple 3 mm

Transmission clear, Reflexion red

Wall mounting : 4 x distance holder 4596100

“ In Focus “ in detail
