

Room design - **Sunset** - Original size approx. 63 x 46 cm / 19" x 25"

“ Sunset “

Touched by the last rays of the sun, white clouds change into bluish purple colors.

The turquoise water of the surface is colored yellow, orange, before the sun finally disappears until the next morning.

Romantic moments, mild summer evenings by the beach.

A sunset is something, anybody is fascinated by, when the setting sun with incredible colors of the day passes by.

This glass picture always reminds me again, of memorable romantic moments on the Baltic sea and it's beach at Graal-Müritz.

Depending on the light and angle of view, the used transparent and refined satin iridescent coated glass, is the effect from Bullseye Glass, times intensely colored, while also often subtle, and of gentle and lightly brilliance.

For the overall quality of this glass work, probably indispensable is the round disc, dichroic coated colorless glass structure, which embodies the dazzling sun.

Material:

Dichroic (3534235) UCGR-RR clear ripple 3 mm, transmission clear, reflexion red

Bullseye 1464-31 Fi, transparent, blue, iridescent

Bullseye 1437-31 Fi, transparent, light amber, iridescent
